

SaaS Business Performance Analysis

Executive Business Insights & Strategic Recommendations

1. Premium Plan Performance

Business Insight

Premium subscription plans demonstrate stronger customer adoption, indicating that customers perceive higher value in advanced service offerings.

Recommendation

Enhance premium features and implement targeted upselling campaigns to increase premium plan adoption.

2. Customer Acquisition & Retention

Business Insight

The subscription model supports a stable customer base, reflecting consistent customer acquisition and recurring engagement.

Recommendation

Strengthen customer onboarding, engagement programs, and retention strategies to improve long-term customer loyalty.

3. Subscription Growth Pattern

Business Insight

Subscription activity varies across different time periods, indicating fluctuations in customer demand and business performance.

Recommendation

Plan promotional campaigns during slower periods to maintain consistent subscription growth.

4. Regional Performance

Business Insight

Customer adoption differs across regions, highlighting opportunities for business expansion in underperforming markets.

Recommendation

Increase marketing investments and customer outreach in regions with lower adoption rates.

5. Pricing Strategy

Business Insight

The current pricing and discount strategy effectively supports customer acquisition while maintaining business competitiveness.

Recommendation

Continuously monitor pricing performance and optimize discount campaigns based on customer behavior and business objectives.

6. Customer Segmentation

Business Insight

Customer segments exhibit different adoption and engagement patterns, indicating varying business needs across customer groups.

Recommendation

Implement personalized engagement strategies and customized service offerings for each customer segment.

Dataset Limitations

Although the dataset provides valuable business insights, several limitations should be considered during analysis.

- The dataset contains only Premium and Standard plan categories, limiting plan-level comparisons.
- Customer Type includes only B2B customers, preventing comparisons with B2C users.
- Payment Status was intentionally excluded from dashboard KPIs because unsuccessful payments do not represent realized business revenue.
- The dataset represents a limited business period and may not capture long-term market trends or seasonality.
- Certain business attributes are simulated for analytical purposes and may not reflect every real-world SaaS operational scenario.
- External factors such as customer satisfaction surveys, competitor pricing, and marketing campaign performance are not included.

Data Cleaning Log

Cleaning Activity	Before	After	Action Performed
Row Count Validation	Original dataset	Verified	Confirmed row count remained consistent after cleaning
Missing Values	Present	Resolved	Handled missing values using appropriate cleaning techniques
Duplicate Records	Identified	Removed	Removed duplicate customer and transaction records
Data Types	Mixed formats	Standardized	Converted date, numeric, and text columns to correct data types
Text Formatting	Inconsistent	Standardized	Trimmed whitespace and standardized text values
Category Standardization	Inconsistent labels	Standardized	Standardized Plan Category, Region, and other categorical values
Invalid Values	Detected	Corrected	Reviewed and corrected inconsistent or invalid entries
Final Validation	Pending	Completed	Verified dataset integrity before SQL, Python, and Power BI analysis
